ADDITIONAL INVESTIGATION			
PARAMETER	OBSERVED VALUE	FLAG	REFERENCE RANGE
Urine Microalbumin	42	HIGH	< 30 mg/L
Albumin/Creatinine Ratio	38.6	HIGH	< 30 mg/g

IMPRESSION

Significant pyuria with bacteriuria and positive nitrite / leucocyte esterase.
Findings are suggestive of URINARY TRACT INFECTION.
Raised urine microalbumin noted - may reflect early diabetic nephropathy; correlate with glycaemic status. Suggest urine culture with sensitivity before initiating antibiotics.

ADVICE

Urine culture & sensitivity advised. Review with treating physician. Maintain adequate hydration.
